In the radiotherapy, treatment planning is a critical step made by a team consisting of radiation oncologists, radiation therapists, medical physicists, and dosimetrists. There are two types of planning methods: forward and inverse planning [6]. Forward planning is a step-by-step approach to effective radiotherapy planning and delivery. Presents content in consistent, concise, bulleted format for easy review. Includes over 200 color images. Explains specific technical aspects of delivering radiation treatment. Addresses such specialized topics as palliative therapy and pediatrics. New to the Second Edition: Stereotactic body radiation therapy (SBRT) for prostate and GI tumors. Intraoperative therapy for GI tumors. Volumetric modulated arc therapy (VMAT) has been added to the Third Edition. Add a gift receipt with prices hidden. Other Sellers on Amazon. Neil Woody, MD, is Chief Resident, Department of Radiation Oncology, Taussig Cancer Institute, The Cleveland Clinic, Cleveland, OH. Product details. ASIN: 1620700352. Good book for planning techniques in short...it's like a notes from Perez and Gunderson. Read more. Report abuse.
