The Fisherman's Problem: Ecology and Law in the California Fisheries, 1850-1980; Cambridge University Press, 1986; 1986; Arthur F. McEvoy; 9780521385862; 368 pages

The Fisherman's Problem is a study of the interaction among resource ecology, economic enterprise, and law in the history of the California fishing industry. It analyzes the ways in which the natural environment not only provided the raw material for economic development but played an active role in it as well. By reconstructing the ecological history of the fisheries during the nineteenth and twentieth centuries, this study develops a new perspective on environmental problems as contemporary observers understood them and on the results of their efforts to deal with those problems. The book concludes with an analysis of significant changes taking place in the 1970s and 1980s in the politics and theory of resource management.

McEvoy persuasively argues the broad themes of the story, such as the ongoing importance of the environment and political inertia. The support for his arguments comes from interpretation of documents along with several useful maps and a judicious use of tables and graphs to demonstrate the relationship of the data over time. This book, The Fisherman's Problem: Ecology and Law in the California Fisheries 1850-1980 (Studies in...) by Arthur F. McEvoy Paperback $31.49. Available to ship in 1-2 days. Ships from and sold by Amazon.com. FREE Shipping. Details.

In it, he clarifies, and annotates in painstaking detail, the environmental and social issues relating not only to West Coast fisheries but also to the theory and politics of resource management in general. A critical appraisal of California's fishing industry management develops from an interdisciplinary compilation of recent research in law, economics, marine biology and anthropology. Product details.
